Hiring Team

Coinbase

Dear Hiring Team,

I'm writing to express my strong interest in the Product Manager position at Coinbase. With over six years of software engineering experience across fintech, trading, and insurance domains, I bring a unique blend of technical depth and product intuition that aligns well with Coinbases mission to increase economic freedom in the world.

During my time at FlexTrade and Fidelity Investments, I led the development of high-volume trading applications, automated critical workflows, and collaborated with cross-functional teams to launch scalable products that improved performance and user experience. Ive worked directly with hedge fund clients, coordinated Agile sprints, and delivered impactful reporting solutions all of which have sharpened my ability to drive products from concept to execution.

What draws me to Coinbase is the companys bold vision, product-first culture, and commitment to building secure, user-centric crypto experiences. Im excited by the opportunity to contribute to products that redefine how people interact with money globally. With a strong foundation in backend systems, cloud platforms (AWS), and user-facing tools, Im confident in my ability to collaborate across engineering, design, and business teams to build innovative, high-performing solutions.

Thank you for considering my application. I'd welcome the opportunity to further discuss how my background and passion for transformative technologies can add value to the Coinbase product team.

Warm regards,

Mansi Khanna
