

Dear Sir/ Ma'am

I am writing this letter to humbly request a GRE waiver to pursue Supply Chain Analytics at Rutgers Business School.

Since my formative years, I have been committed to maintaining a consistent academic performance. My proficiency in quantitative subjects is demonstrated by my steady and gradually escalating scores in Mathematical and statistical subjects.

My progressive academic record rendered me an opportunity to pursue B.M.S at the undergraduate level in one of the country's well-reputed NAAC accredited colleges, Jai Hind College, Mumbai University. As a commerce graduate with the First Division, I maintained a good score in Business Mathematics & Business Statistics. However, when I faced certain perplexities during the duration of my course I took every effort to overcome them and strived to maintain an unfluctuating score across my academic profile.

Post under graduation, my aptitude for reasoning and a passion for learning rendered me an opportunity to lay the stepping stone of my professional career in one of the India's leading freight forwarding firm's TeamGlobal Logistics limited during Covid-19. At TGL Ltd, my ability to evaluate a situation with a careful and straightforward thought process enabled me to undertake diverse assignments like drafting the master airwaybill, for an air cargo shipment. My propensity toward operations helped me develop skills in performance measurement concerning transportation, warehousing, and other supply chain aspects. I mastered the inside out of the customs department documentation and also gained deep insight into the supply chain industry.

To upscale my knowledge and gain a competitive edge, I have completed an online program on data analytics in supply chain management. The program played a fundamental role in explaining the overview of how data analytics is used in the supply chain industry. The course also helped me better understand how to manage inventory levels, and consumption rates. Further, I am currently pursuing a course on Project management, which has helped me learn new techniques for using the KanBan board, Gantt chart, network diagram, Project risk management, and managing the Project management software. This course has further refined my knowledge of how project management and supply chain management coincide with each other. I am also pursuing an online course on Lean Six Sigma (Yellow Belt) to comprehend the basics of the DMAIC process for improvement projects and the concept of Costs of Quality and how to reduce them. I have pursued the above-mentioned courses through Udemy- a well-recognized online platform providing an array of professional courses.

Based on my unwavering efforts in academics, certificate programs covering an introduction to multiple aspects of supply chain analytics, project management, and LSS as well as an evolving work experience including exposure in operations and supply chain management in my previous position in TeamGlobal, I would like to request my case to be considered for a waiver.

I look forward to being a part of Rutgers Business School & continue my learning in the field of Supply Chain Analytics.

Regards  
Siddhant Khanna
